

Power Server ID™

The world's most powerful and recognized SSL certificate

FEATURES & BENEFITS

- Compatible with most popular mobile computing platforms, AND 99% of all browsers
- Rapid authentication & issuance
- Unlimited self-service reissuance of lost certificates
- Dynamically generated site seal for identity verification
- True 128-bit encryption
- Premium warranty and installation support

Universally recognized certificates for today's global economy

In today's increasingly mobile computing environment, users need ubiquitous connectivity, whether accessing Web-based information from their desktop, handheld computing device or smart phone. Power Server ID offers just that – a global digital certificate that provides the highest level of browser compatibility and web security for mobile and networked environments.

An ideal solution for hosting companies and enterprises with a global e-business base, Power Server ID ensures that any customer can connect from any device, anywhere, anytime.

Secure mobility for your customers from a trusted root

The Power Server ID digital certificate is issued under the most widely embedded GeoTrust root - the Equifax Secure CA root. The root is present in most popular wireless devices, in addition to 99% of all web servers and browsers, allowing you to securely connect to Web sites protected by GeoTrust Power Server ID certificates. Compatible wireless appliances and operating systems include Access Co. Netfront 3.1+ for the Nokia Series 60 Phone; Opera 7+; Palm/Handspring Blazer 2.0+; Microsoft Internet Explorer- Pocket PC 2003+; Microsoft Internet Explorer- Smartphone 2003+; Blackberry 4.0+; and ATT WAP 1.0.

And, unlike other companies who issue certificates off chained roots or who license their roots from third parties, GeoTrust is able to offer its customers a simplified installation process, less maintenance and an assurance of root stability during the life of a certificate.

Comprehensive support and protection plan

Power Server ID includes our most comprehensive set of warranty, support and administrative features, such as:

Installation Support - Our customer support plan includes one-on-one assistance for generating a certificate request, completing online enrollment and installing the resulting certificate.

Premium Level Warranty - Our insurance policy protects against economic loss due to fraud, theft, corruption or loss of use of an SSL certificate or private key.

Certificate Re-issuance - In the event your server crashes and certificates are destroyed or otherwise inadvertently overwritten, we'll replace your certificates free throughout the lifetime of the certificate.

Rapid authentication and issuance

With our patent-pending automated process for vetting and issuing certificates, we'll typically authenticate your Web site and business, and issue a Power Server ID certificate, in 10 minutes or less. As part of the provisioning process for Power Server ID, your business will be registered with ChoicePoint and assigned a ChoicePoint Unique Identifier (CUI) - equivalent to a DUNS number. This business registration profile initially contains the basic self-reported information from your CSR - your Domain, Company Name, Division, Country, State and City. ChoicePoint will allow relying parties to view and purchase additional data about your company. With access to your corporate profile, your customers can be confident conducting business online whether from their desk or their mobile computing device.

High profile third-party site seal for your website

With Power Server ID, you get the GeoTrust Smart Seal. Our patented Smart Seal technology provides fast, reliable and user-friendly Web site identity authenticate, and instant proof to your customers that your site can be trusted. The Smart Seal is dynamically-generated when someone visits your site, and displays a live time and date stamp. Users can click on the site seal to display additional verification information.

About GeoTrust, Inc.

GeoTrust is the world's second largest digital certificate provider, and a leader in a wide variety of Identity and Trust services. GeoTrust's comprehensive array of technologies enables organizations of all sizes to secure e-business transactions cost-effectively. The company provides Web hosting companies with digital certificates to secure online transactions; Enterprises with technology to safeguard network access, secure email and digital transactions; Digital signing technology to bind people and documents; and assuring code integrity to wireless platforms. More than 70,000 companies in over 140 countries employ GeoTrust technology for transaction security, identity verification and trust services. For more information, visit www.geotrust.com
